Alcotra Innovation Project Living Labs The project Central European Living Lab for Territorial Innovation (Centralab) was co-funded by the EU and lasted from 2011 to 2014 . By using the results of previous projects, Centralab built upon the concept of a Living Lab to increase the innovation potential of the region and to address some

Alcotra Innovation Project Living Labs

Alcotra Innovation project: Living Labs. Definition, Harmonization Cube Indicators & Good Practices (I. Alcotra, Trans.): Alcotra. Human-centred design processes for interactive systems

(PDF) A Living Labs Approach for Usability Testing of ...

For the study and creation of a best practices Database for Living Labs, a two folded approach was chosen by the Alcotra Innovation project consortium. On the one hand it became clear in the beginning of the project that a general overview about the Living Lab activities in Europe would be desirable to provide a general understanding about Living Labs and their characterization.

Best Practices: Database for Living Labs - Alcotra ...

The project Central European Living Lab for Territorial Innovation (Centralab) was co-funded by the EU and lasted from 2011 to 2014 . By using the results of previous projects, Centralab built upon the concept of a Living Lab to increase the innovation potential of the region and to address some of the shared concerns related to eco-tourism, energy, SME networks, mobility, climate change, waste management, e-health, environment, media and creativity, and also rural development.

Paola Capello - Alcotra Innovazione

Living Laboratories Initiative. The Living Laboratories Initiative is an integrated approach to agricultural innovation that brings farmers, scientists, and other partners together to co-develop, test, and monitor new practices and technologies in a real-life context. The result will be more practical technologies and sustainable farming practices adopted more quickly by Canadian farmers.

Living Laboratories Initiative - Agriculture and Agri-Food ...

2. 1 INTRODUCTION. The Living Lab concept moves research and development out of laboratories into real-life contexts, and seems therefore appropriate to get a better understanding in what triggers innovations and which innovations proof to be successful in different environmental, social, and cultural contexts.

THE LIVING LABS HARMONIZATION CUBE: COMMUNICATING LIVING ...

Project admin 2020-11-27T12:26:46+01:00. LIVERUR aims to support businesses, projects and initiatives in designing innovative business models in rural areas, moving towards a Circular Economy and including all important stakeholders by following the Living Lab approach. Living Laboratories are ecosystems of open innovation, centred on the user, which often operate in a territorial context, integrating concurrent research and innovation processes within a public-private partnership.

H2020 European project about Circular Economy and Living ...

Living labs are platforms that implement this open innovation model by a successful mixture of ICT-based collaborative environments, open innovation platforms, user centric product/service development methods, and public-private partnerships, and will most likely cause potentially disruptive but positive and long lasting transformational effects among European industry, markets, regional economies and societal landscapes.

Choosing the best model of living lab collaboration for ...

The project was created in partnership with Autodesk Pier 9, Autodesk Research User Interface Group, and the ICD (Institute for Computational Design) at the University of Stuttgart. This project forefronts a combination of experimental technologies for design and construction, including tensegrity structures, generative design, robotic ...

The Living

Stereogramator Inspired by a library patron's art project, the Stereogramator is Labs' latest user collaboration app, inviting the public to transform over 40,000 historical stereographs into web-friendly 3D formats shareable to all. For the better part of a century, stereoscopic views were the cutting edge of immersive 3D entertainment, and for over a decade the Library has been sharing ...

Digital Projects | The New York Public Library

The Alcotra project aims to bring to life a cross-border Living Lab to stimulate the development of an ecosystem of "creative industries". Their experiments will be an opportunity to bring together actors in creative industries from the Alcotra territories (Rhône-Alpes Region, PACA, Piémont.)

Alcotra 2013 - L'ATELIER ARTS SCIENCES

While the application of AI in e-commerce is now table stakes, there haven't been many physical explorations of its potential. But IRL is designed to do just that.. Walmart's tech incubator Store N o 8 has positioned the store within one of the company's busiest locations. Testing new, innovative ideas within a real store containing over 30,000 items is an opportunity that Mike Hanrahan ...

Walmart's New Intelligent Retail Lab Shows a Glimpse into...

Introduction. Living labs are complex partnerships, as they facilitate not only university–industry relationships but also relationships between large companies, SMEs, and startups, resulting in what is often referred to as public–private–people partnerships (4P's) (Westerlund & Leminen, 2011).

Innovation Management in Living Lab Projects: The ...

Newlab applies transformative technology to things that matter. We are home to over 800 entrepreneurs, engineers, and inventors solving the world's biggest challenges.

Digital Participation through Social Living Labs connects two largely separate debates: On the one hand, high speed internet access and associated technologies are often heralded as a means to bring about not only connectivity, but also innovation, economic development, new jobs, and regional prosperity. On the other hand, community development research has established that access by itself is necessary but not sufficient to foster digital participation for the broadest possible range of individuals. Edited by leading scholars from the fields of education, youth studies, urban informatics, librarianship, communication technology, and digital media studies, this book is positioned as a link to connect these debates. It brings together an international collection of empirically grounded case studies by researchers and practitioners from diverse backgrounds. They advance knowledge that fosters digital participation by identifying the specific digital needs, issues and practices of different types of communities as they seek to take advantage of access to digital technologies. Collectively, these cases propose new ways for enabling residents to develop their digital confidence and skills both at home and in their local community, particularly through a 'social living labs' approach. The book is organised around key focus areas: digital skills enhancement, youth entrepreneurship, connected learning, community digital storytelling, community-led digital initiatives and policy development. Highlights that high speed internet is necessary that high speed internet access is necessary but not sufficient to resolve digital divides and foster social inclusion; Brings together international, empirically grounded case studies to identify digital needs, issues and practices of different communities, and contextualises these with expert comment; Presents contributions from multiple disciplines, with most chapters incorporating more than one disciplinary background; Gives insight on the place of the digital in contemporary society; Illustrates the innovative potential of social living labs to foster digital learning and participation in a variety of community contexts.

This book explores how the concept or urban experimentation is being used to reshape practices of knowledge production in urban debates about resilience, climate change governance, and socio-technical transitions. With contributions from leading scholars, and case studies from the Global North and South, from small to large scale cities, this book suggests that urban experiments offer novel modes of engagement, governance, and politics that both challenge and complement conventional strategies. The book is organized around three cross-cutting themes. Part I explores the logics of urban experimentation, different approaches, and how and why they are deployed. Part II considers how experiments are being staged within cities, by whom, and with what effects? Part III examines how entire cities or groups of cities are constructed as experiments. This book seeks to contribute a deeper and more socially and politically nuanced understanding of how urban experiments shape cities and drive wider changes in society, providing a framework to examine the phenomenon of urban experimentation in conceptual and empirical detail.

This book presents cutting-edge work on innovative planning methodologies, tools and experiences aimed at supporting the transition of our cities and regions towards a more smart and sustainable dimension. This book comprises a selection of the best papers presented at the international conference "Smart and Sustainable Planning for Cities and Regions 2015", held in November 2015 in Bolzano, Italy. Contributions from different research fields within urban and regional planning from the scientific as well as the professional community are presented: energy planning for cities and regions, how to couple the energy-climate goals with the development or renovation of the built environment and how to tackle the vulnerability to climate change; smart and sustainable technologies, big data, integrated infrastructures and mobility management, from holistic geospatial tools to innovative apps and Internet of Things; benefits, costs and opportunities of urban transition toward a more smart and sustainable dimension, accounting and assessment of values and trade-offs within the decision making processes; governance for smart and sustainable growth, fostering place-based policy-making, active and effective stakeholders' participation, co-production and public-private partnerships; cooperation and demonstration projects: their role in fostering the adoption of new approaches and technologies, towards the development of win-win solutions.

This book presents a comprehensive overview of the various aspects for the development of smart cities from a European perspective. It presents both theoretical concepts as well as empirical studies and cases of smart city programs and their capacity to create value for citizens. The contributions in this book are a result of an increasing interest for this topic, supported by both national governments and international institutions. The book offers a large panorama of the most important aspects of smart cities evolution and implementation. It compares European best practices and analyzes how smart projects and programs in cities could help to improve the quality of life in the urban space and to promote cultural and economic development.

The implementation of sustainability initiatives on campuses is an essential component of promoting sustainability in the higher education context. In addition to reflecting an awareness of environmental issues, campus programmes demonstrate how seriously universities take sustainability at the institutional level. There is a lack of truly interdisciplinary publications that comprehensively address the issue of campus greening, and there is an even greater need for publications that do so at a truly international level. This book meets these needs. It is one of the outcomes of the "Second Symposium on Sustainability in University Campuses" (SSUC-2018), which was jointly organised by the University of Florence (Italy), Manchester Metropolitan University (UK), the Research and Transfer Centre "Sustainable Development and Climate Change Management" and the "European School of Sustainability Science and Research" at the Hamburg University of Applied Sciences (Germany), in cooperation with the Inter-University Sustainable Development Research Programme (IUSDRP). The book showcases examples of campus-based research and teaching projects, regenerative campus design, low-carbon and zero-carbon buildings, waste prevention, and resilient transport, among others. Ultimately, it demonstrates the role of campuses as platforms for transformative social learning and research, and explores the means by which university campuses can be made more sustainable. The aims of this publication are as follows: • to provide universities with essential information on campus greening and sustainable campus development initiatives from around the world; • to share ideas and lessons learned in the course of research, teaching and projects on campus greening and design, especially successful initiatives and good practice; and • to introduce methodological approaches and projects intended to integrate the topic of sustainable development in campus design and operations. This book gathers contributions from researchers and practitioners in the field of campus greening and sustainable development in the widest sense, from business and economics, to the arts, administration and the environment, and hailing from Europe, Latin America, North America and Asia.

Within the most recent discussion on smart cities and the way this vision is affecting urban changes and dynamics, this book explores the interplay between planning and design both at the level of the design and planning domains' theories and practices. Urban transformation is widely recognized as a complex phenomenon, rich in uncertainty. It is the unpredictable consequence of complex interplay between urban forces (both top-down or bottom-up), urban resources (spatial, social, economic and infrastructural as well as political or cognitive) and transformation opportunities (endogenous or exogenous). The recent attention to Urban Living Lab and Smart City initiatives is disclosing promising bridge between the micro-scale environments, with the dynamics of such forces and resources, and the urban governance mechanisms. This bridge is represented by those urban collaborative environments, where processes of smart service co-design take place through dialogic interaction with and among citizens within a situated and cultural-specific frame.

Advanced Zero Waste Tools: Present and Emerging Waste Management Practices, Volume One in the Concepts of Advanced Zero Waste Tools series addresses the fundamental principles of zero waste that encourages the redesign of resource lifecycles so that products are reused. By promoting reuse and recycling, as well as prevention and product designs that consider the entire product lifecycle, the zero waste philosophy advocates for sustainability and environmental management and protection. This book takes the first step toward addressing the tools needed to implement zero waste, both on a practical and conceptual scale. In addition to environmental and engineering principles, the book also covers economic, toxicologic and regulatory issues, making it an important resource for researchers, engineers and policymakers working toward environmental sustainability. Uses fundamental, interdisciplinary and state-of-the-art coverage of zero waste research to provide an integrated approach to tools, methodology and indicators Covers current challenges, design and manufacturing technology, and sustainability applications Includes up-to-date references and web resources at the end of each chapter, as well as a webpage dedicated to providing supplementary information

The three-volume set LNCS 9186, 9187, and 9188 constitutes the proceedings of the 4th International Conference on Design, User Experience, and Usability, DUXU 2015, held as part of the 17th International Conference on Human-Computer Interaction, HCI 2015, in Los Angeles, CA, USA, in August 2015, jointly with 13 other thematically similar conferences. The total of 1462 papers and 246 posters presented at the HCI 2015 conferences were carefully reviewed and selected from 4843 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of Human-Computer Interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The total of 132 contributions included in the DUXU proceedings were carefully reviewed and selected for inclusion in this three-volume set. The 61 papers included in this volume are organized in topical sections on design thinking, user experience design and usability methods and tools, DUXU management and practice, emotional and persuasion design, and storytelling, narrative and fiction in DUXU.

The proliferation of entrepreneurship, technological and business innovations, emerging social trends and lifestyles, employment patterns, and other developments in the global context involve creative destruction that transcends geographic and political boundaries and economic sectors and industries. This creates a need for an interdisciplinary exploration of disruptive technologies, their impacts, and their implications for various stakeholders widely ranging from government agencies to major corporations to consumer groups and individuals. Disruptive Technology: Concepts, Methodologies, Tools, and Applications is a vital reference source that examines innovation, imitation, and creative destruction as critical factors and agents of socio-economic growth and progress in the context of emerging challenges and opportunities for business development and strategic advantage. Highlighting a range of topics such as IT innovation, business strategy, and sustainability, this multi-volume book is ideally designed for entrepreneurs, business executives, business professionals, academicians, and researchers interested in strategic decision making using innovations and competitiveness.

All cities face a pressing challenge – how can they provide economic prosperity and social cohesion while achieving environmental sustainability? In response, new collaborations are emerging in the form of urban living labs – sites devised to design, test and learn from social and technical innovation in real time. The aim of this volume is to examine, inform and advance the governance of sustainability transitions through urban living labs. Notably, urban living labs are proliferating rapidly across the globe as a means through which public and private actors are testing innovations in buildings, transport and energy systems. Yet despite the experimentation taking place on the ground, we lack systematic learning and international comparison across urban and national contexts about their impacts and effectiveness. We have limited knowledge on how good practice can be scaled up to achieve the transformative change required. This book brings together leading international researchers within a systematic comparative framework for evaluating the design, practices and processes of urban living labs to enable the comparative analysis of their potential and limits. It provides new insights into the governance of urban sustainability and how to improve the design and implementation of urban living labs in order to realise their potential.
