Customer expectations and international competition are obliging car and commercial vehicle manufacturers to produce more efficient and cleaner products in shorter product cycle times. The consideration of Engine Tribology has a leading role to play in helping to achieve these goals. Specific areas of interdisciplinary interest include: design influences on fuel economy and emissions; new

materials (ceramics, steels, coatings, lubricants, additives); low viscosity lubricants; and low heat rejection (adiabatic) engines. This volume gives a detailed and current review on some basic features of tribology particularly associated with internal combustion engines such as: lubrication analysis relevant to plain bearings, Hertzian contact theory and elastohydrodynamic lubrication associated with cams and followers and friction and wear in a general context. Several chapters examine engine bearings, valve trains, (cams and followers) and piston assemblies. For each machine element a background introduction is followed by design interpretations and a consideration of future developments. The important topic of materials, solids and lubricants is focused upon in the concluding chapters. The work will be of interest to engineers and researchers in the automobile, automotive products, petroleum and associated industries.

Management of Coking Coal Resources provides a one-stop reference that focuses on sustainable mining practices using a four-point approach that includes the economical, governmental, societal, and environmental aspects of coal exploration, coking coal mining, and steelmaking applications. This type of approach galvanizes the excavation, processing methods, and end uses of coal as an energy and steelmaking source, thus ensuring that the supply of coking coal meets the future demands of the rapidly expanding economies in India and other developing countries. The book provides information on the strategic planning and revitalization of India's Jharia coalfield, addressing actionable plans for methods of extraction, master plans for mine fires, subsidence management, land use planning, and sustainable mining. Users will find a multidisciplinary reference that presents the broad range of applications, techniques, and methodologies used in maintaining coking coal quality from exploration through extraction. The last thing Natalia Kristoff expected was that her friend's wild dream to find her a fake husband for a Green Card would have any sort of success. Yet here she is, sitting in a private booth, listening to the sexiest man she's ever seen lay out the details of just what he needs from her. IN return, he's going to sign the papers that stand between her and her dream job. She can't believe what she's hearing. Stand at his side, pretend she's madly in love with him, all to satisfy some crazy family tradition? That's a deal she can live with. Kirell Ursa has a problem. A big one. His bear shifter family is in shambles, struck from within by traitors. With no one in charge of security, the head of his House has nominated him for the job. The only problem? Tradition dictates that anyone in power must have a mate. If he's going to pull off this scheme, he must find a mate in the next 72hrs. Someone. Anyone. All they have to do is pretend to love him for a few days. Things get off to a rocky start between the two when their first date is interrupted by Kirell's enemies. As he slowly exposes Natalia to the truth, she's forced to come to grips with the existence of another world, one she never thought existed. Shifters of all sorts collide as Kirell's

enemies work to expose his fraud, but the harder they try, the more Natalia finds she wants to be by his side. Can a relationship built on a handshake business agreement turn into something real, even in the face of a threat to Natalia's very life?

Produced by the Asian Development Bank in cooperation with Japan Sanitation Consortium, this publication also documents key policies and laws that enable the integration of sewerage systems and wastewater treatment facilities in development plans. It shares learnings on how the sanitation challenge can be met, not only at the community, but also at the national level.

Little Book of Tractors is a celebration of the pioneers and innovators whose names have become synonymous with tractors - Henry Ford and his "Fordson", Harry Ferguson and the "Little Grey Fergie", John Deere, Farmall and David Brown to name just a few. This colorful book charts the history of these companies and their incredibly inventive machines as well as showing how takeovers and mergers have resulted in the loss of the majority of these historic names. Little Book of Tractors also takes a look at unusual tractor designs and specialist tractors, tractor trials, farming implements, and what future challenges face manufacturers as they work to make their tractors more cost efficient and less polluting than ever before. Most of all, this affectionate tribute shows how tractors have not only been indispensable to farmers but become part of the fabric of country life, dearly loved by the people.
