Di Antonino Giuffrè ricordiamo tutti, in primo luogo, l'amicizia e l'umanità. In secondo luogo, come suoi discepoli, il grande impegno didattico, istituzionale ed accademico da Lui profuso nelle Facoltà di Architettura: prima quella della Sapienza e poi quella di Roma Tre di cui, a sessanta anni già compiuti, fu uno dei fondatori. Infine, l'ampiezza, di metodo prima ancora che di contenuti, della sua produzione scientifica iniziata dal tema del progetto di grandi opere in cemento armato, con Carlo Cestelli Guidi, per proseguire con il calcolo automatico delle strutture, la dinamica stocastica e l'ingegneria sismica. Questo volume, tuttavia, ha come preciso obiettivo quello di mettere in luce il periodo finale della produzione intellettuale e scientifica di Antonino Giuffrè, dal 1985 al 1997. È il periodo della piena maturità, della compiuta sintesi tra i temi di Ricerca e la Didattica nella Facoltà di Architettura, dell'approccio multidisciplinare al problema della conservazione del patrimonio costruito: scienza e tecnica delle costruzioni ma anche restauro dei monumenti, storia dell'architettura e delle tecniche costruttive. È il periodo interrotto dalla prematura scomparsa che non ha dato modo di valorizzare e sistematizzare a pieno un vasto patrimonio di idee e conoscenze che ancora oggi, al di là della ristretta cerchia degli addetti ai lavori, non è conosciuto come meriterebbe nei contenuti e nel metodo. Il volume è a cura di Caterina F. Carocci e Cesare Tocci.

Structural interventions to historic buildings are however an integral part of the effort to select and update their design, historic and cultural values. Structural Design in Building Conservation deals with such design issues and shows how technical choices integrate with the planning and architectural outcomes in a conservation project. It brings together theory with current conservation technology, discussing the possibilities of structural details and strategies in architectural expression and is particularly directed at students of architectural conservation technology and practicing engineers and architects--

This book presents the fundamentals of strengthening and retrofitting approaches, solutions and technologies for existing structures. It addresses in detail specific techniques for the strengthening of traditional constructions, reinforced concrete buildings, bridges and their foundations. Finally, it discusses issues related to standards and economic decision support tools for retrofitting.
