Warfighting should help the Marine Commander and troop prepare mentally, physically, both externally, and internally for combat action. It covers the distinct levels of war -- strategic, operational, and tactical, conduct of war, and types of warfare. Every Marine Corps officer should understand and apply the principles to understand the demands of war, theory of war, including the foundations, preparation and actively engagin within war. This guide provides authoritative guidance for the completion of this war task as a key method to instill successful outcomes and strategic battlefield dynamic development within the nature of the war environment. Leading Marines, first published in 1995 and updated in 2014, is the US Marines' main publication describing its leadership philosophy.

This is General Friedrich Wilhelm von Steuben's book -- this copy published in 1779 -- which explains and details his philosophy regarding troops and their regulation, a philosophy which was essential to the creation of a disciplined Continental Army during the American Revolution. This includes scans of the original plates used to help describe troop, column, and file movements in various terrain.

"The Leader's Bookshelf" identifies the "Top 50" books that can help anyone become a better leader. The works selected were based on hundreds of interviews with the most senior active and retired four-star U.S. military leaders who identified books from which they gained the special insights which helped propel them to success in the most demanding leadership challenges. Each of those fifty works -- novels, memoirs, biographies, autobiographies, leadership works -- are concisely summarized and the key leadership lessons extracted and presented. Admiral Jim Stavridis and his co-author, R. Manning Ancell, have been surveying very senior military leaders for the past several years regarding their reading habits and favorite books. They have spoken to over 200 four-star officers, including those both currently on active duty and retired. Each of those admirals and generals was asked for a list of books that strongly influenced their leadership skills. Stavridis and Mancell then collated the data and analyzed which books were mentioned most frequently and which ones were most compelling in the leadership lessons offered the reader. The survey, while not scientific, was quite comprehensive. From it, Stavridis and Ancell built a powerful set of recommended readings. Whether individuals work their way through the entire top 50 list and read each book cover to cover, or read the summaries provided in "The Leader's Bookshelf" to determine which appeal to them most -- this book will provide a roadmap to better leadership. "The Leader's Bookshelf" highlights the value of reading for leaders in a philosophical and practical sense, provides advice on how to build an extensive library, lists other books worth reading to improve leadership skills, and analyzes how leaders use what they read to achieve their goals. "The Leader's Bookshelf" is a book for anyone who wants to improve their ability to lead -- whether in their family life, their professional endeavors, or within our society and civic organizations.

This book covers both classical and modern models in deep learning. The primary focus is on the theory and algorithms of deep learning. The theory and algorithms of neural networks are particularly important for understanding important concepts, so that one can understand the important design concepts of neural architectures in different applications. Why do neural networks work? When do they work better than off-the-shelf machine-learning models? When is depth useful? Why is training neural networks so hard? What are the pitfalls? The book is also rich in discussing different applications in order to give the practitioner a flavor of how neural architectures are designed for different types of problems. Applications associated with many different areas like recommender systems, machine translation, image captioning, image classification, reinforcement-learning based gaming, and text analytics are covered. The chapters of this book span three categories: The basics of neural networks: Many traditional machine learning models can be understood as special cases of neural networks. An emphasis is placed in the first two chapters on understanding the relationship between traditional machine learning and neural networks. Support vector machines, linear/logistic regression, singular value decomposition, matrix factorization, and recommender systems are shown to be special cases of neural networks. These methods are studied together with recent feature engineering methods like word2vec. Fundamentals of neural networks: A detailed discussion of training and regularization is provided in Chapters 3 and 4. Chapters 5 and 6 present radial-basis function (RBF) networks and restricted Boltzmann machines. Advanced topics in neural networks: Chapters 7 and 8 discuss recurrent neural networks and convolutional neural networks. Several advanced topics like deep reinforcement learning, neural Turing machines, Kohonen self-organizing maps, and generative adversarial networks are introduced in Chapters 9 and 10. The book is written for graduate students, researchers, and practitioners. Numerous exercises are available along with a solution manual to aid in classroom teaching. Where possible, an application-centric view is highlighted in order to provide an understanding of the practical uses of each class of techniques.

U.S. Marines in Irregular Warfare: Training and Education is a brief history that recounts how the U.S. Marine Corps adapted to fight the Global War on Terrorism during 2000-10. The Marine Corps has a long history of fighting irregular wars, including the Banana Wars in Central America during the 1920s and the Vietnam War during the 1960s. To battle the insurgencies in Iraq and Afghanistan, the Corps drew upon this experience while also implementing new plans and programs to better prepare Marines to carry out counterinsurgency operations. The Marine Corps updated the curriculum at the Command and Staff College and transformed the annual Combined Arms Exercise into Exercise Mojave Viper: an immersive training program that simulated the urban environments in which Marines would be operating in Southwest Asia. Most importantly, Marines adjusted in the field, as battalion and company commanders drew on their basic training and education to devise innovative tactics to better combat the new threats they now faced. ?us, as this story shows, the Marine Corps did not undergo a radical transformation to fight in Iraq and Afghanistan, but instead drew on principles that had defined it as a warfighting organization throughout most of its history.
