The latest update to Bela Liptak's acclaimed "bible" of instrument engineering is now available. Retaining the format that made the previous editions bestsellers in their own right, the fourth edition of Process Control and Optimization continues the tradition of providing quick and easy access to highly practical information. The authors are practicing engineers, not theoretical people from academia, and their from-the-trenches advice has been repeatedly tested in real-life applications. Expanded coverage includes descriptions of overseas manufacturer's products and concepts, model-based optimization in control theory, new major inventions and innovations in control valves, and a full chapter devoted to safety. With more than 2000 graphs, figures, and tables, this all-inclusive encyclopedic volume replaces an entire library with one authoritative reference. The fourth edition brings the content of the previous editions completely up to date, incorporates the developments of the last decade, and broadens the horizons of the work from an American to a global perspective. B é la G. Lipt á k speaks on Post-Oil Energy Technology on the AT&T Tech Channel.

This Caribbean Billfish Management and Conservation Plan was created to reverse the trend of declining stocks of billfish species within the Western Central Atlantic Ocean and its adjacent seas, and address unsustainable fishing practices. Its objective is to outline and guide the implementation of a suite of billfish management measures over a five-year period at regional and sub-regional scales to help secure the potential future benefits that can accrue from billfish stocks in the Caribbean. The overarching goal is to improve the management and conservation of billfish stocks. Among other objectives, the plan seeks to improve billfish catch, data collection and reporting; reduce bycatch, discards and overall fishing mortality; improve regional governance and coordination; and enhance the sustainable socio-economic performance of fisheries capturing billfishes in the area. The Members of the Western Central Atlantic Fishery Commission (WECAFC), Caribbean Regional Fisheries Mechanism (CRFM), Central America Organization for Fishery and Aquaculture (OSPESCA) and the Caribbean Fisheries Management Council (CFMC) developed this plan together during the period 2015-2018, through the Recreational Fisheries Working Group, and in close collaboration with all key stakeholders in the Consortium on Billfish Management and Conservation (CBMC). The plan recognizes the mandate of the International Commission for the Conservation of Atlantic Tunas (ICCAT) over billfish stocks, and supports the implementation of the ICCAT recommendations in the region.

Written by a welding/metallurgical engineer with over 40 years of experience, Arc Welding Processes Handbook delivers the welding and materials expertise required to master complex welding processes and techniques to ensure that the task is done correctly and safely. While reinforcing an understanding of international welding standards and rules. The prefect handbook for those professionals who need an " up- to-date " reference to advance processes as well as those welders new to the field and need to hone their skills. Arc Welding Processes Handbook five-part treatment starts with a clear and rigorous exposition of the applications and equipment of Shielded Metal Arc Welding (SMAW) and Gas Tungsten Arc Welding (GTAW), followed by self-contained parts concerning processes applications and equipment for Gas Metal Arc Welding (GMAW), Flux Core Arc Welding (FCAW), and Submerged Arc welding (SAW). Case studies taken directly from the field are included to highlight each part of the handbook. An applied reference, each Part of Arc Welding Processes Handbook offersvaluable advice regarding the industry or industries where the process is commonly used as well as a description the equipment. The Handbook reaches deeply into the area of nondestructive testing and science. In addition, this Handbook discusses the challenges presented by a number of corrosion-resistant alloys (CRAs). Case studies are included throughout the reference to reinforce an understanding of how these processes were applied in the field and how they intersect with issues that may arise with equipment use and materials.
