Hirshfeld's Astronomy Activity and Laboratory Manual is a collection of twenty classroom-based exercises that provide an active-learning approach to mastering and comprehending key elements of astronomy. Used as a stand-alone activity book, or as a supplement to any mainstream astronomy text, this manual provides a broad, historical approach to the field through a narrative conveying how astronomers gradually assembled their comprehensive picture of the cosmos over time. Each activity has been carefully designed to be implemented in classrooms of any size, and require no specialized equipment beyond a pencil, straightedge, and calculator. The necessary mathematical background is introduced on an as-needed basis for every activity and is accessible for most undergraduate students. Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition.

This is an account of the many ways in which the Sun affects our planet, how its influence has changed over the last few centuries and millennia, and the extent to which we can predict its future impact. The book is the first to integrate astronomical, geological, climatic and social aspects of the Sun. It includes a topical treatment of solar contribution to global warming, and demonstrates how wild and variable is the so-called Solar Constant. Our nearest star is a complex machine which needs to be treated with caution, and this book will equip every reader with the knowledge that is required to understand the benefits and dangers it can bring.
