This IBM® Redbooks® publication describes the concepts, architecture, and implementation of the IBM System Storage® DS8700 storage subsystem. This book has reference information that will help you plan for, install, and configure the DS8700 and also discusses the architecture and components. The DS8700 is the most advanced model in the IBM System Storage DS8000® series. It includes IBM POWER6®-based controllers, with a dual 2-way or dual 4-way processor complex implementation. Its extended connectivity, with up to 128 Fibre Channel/FICON® ports for host connections, make it suitable for multiple server environments in both open systems and IBM System z® environments. If desired, the DS8700 can be integrated in an LDAP infrastructure. The DS8700 supports thin provisioning. Depending on your specific needs, the DS8700 storage subsystem can be equipped with SATA drives, FC drives, and Solid® State Drives (SSDs). The DS8700 can now automatically optimize the use of SSD drives through its no charge Easy Tier feature. The DS8700 also supports Full Disk Encryption (FDE) feature. Its switched Fibre Channel architecture, dual processor complex implementation, high availability design, and the advanced Point-in-Time Copy and Remote Mirror and Copy functions that incorporates make the DS8700 storage subsystem suitable for mission-critical business functions.

There is an enormous sense of excitement in the communities of cancer research and cancer care as we move into the middle third of the first decade of the 21st century. For the first time, there is a true sense of confidence that the tools provided by the human genome project will enable cancer researchers to crack the code of genomic abnormalities that allow tumor cells to live within the body and provide highly specific, virtually non-toxic therapies for the eradication, or at least firm control of human cancers. There is also good reason to hope that these same lines of inquiry will yield better tests for screening, early detection, and prevention of progression beyond curability. While these developments provide a legitimate basis for optimism, many patients will continue to develop cancers and suffer from their debilitating effects, even as research moves ahead. For these individuals, it is imperative that the cancer field make the best possible use of the tools available to provide present day cancer patients with the best chances for cure, effective palliation, or, at the very least, relief from symptoms caused by acute intercurrent complications of cancer. A modality that has emerged as a very useful approach to at least some of these goals is tumor ablation by the use of physical or physiochemical approaches.

This book provides complete, current information on pathophysiology, diagnosis, and treatment of endocrine, metabolic, and reproductive diseases in dogs and cats. It also discusses the importance of testing procedures in endocrine and reproductive diseases, as well as cost-effective and expedient diagnostic protocols. A complete review of reproduction is presented with the endocrine material, making this text the most inclusive resource overall on the topic. Expansive sections on Canine Male and Female Reproduction. The book is divided into nine sections for an organized and accessible approach to information. Discussions of testing procedures in endocrine and reproductive diseases. Explains cost-effective and expedient diagnostic protocols. Logical, step-by-step guidelines aid in accurate decision-making and diagnosis. A new chapter in the Adrenal Gland section (Section 3) addresses feline hyperadrenocorticism. The chapter on diabetes mellitus in the canine and feline has been divided into two chapters in order to explore the specific aspects of the disease in each species. All material has been extensively revised and brought up to date for this edition. Additional tables and algorithms throughout the book summarize and clarify information.

Featuring more than 1,100 full-color and black-and-white illustrations, this volume demonstrates and explains the problems encountered after reconstructive and aesthetic breast surgery and breast cancer reconstruction and the most successful methods for correcting these problems. Each chapter begins with a pictorial analysis of the problem, a discussion of what caused it, and, where possible, suggestions on how it might have been avoided initially. The author then describes the plan for revision surgery, details the actual procedure, and examines postoperative outcomes.

Completely revised and expanded to include technological advances, the second edition of this text illustrates key anatomical structures,

examination procedures and surgical techniques for proper diagnosis, management and treatment of patients with colorectal disorders, providing extensive coverage of various methods in preoperative preparation and assessment, pain management, sedation, and wound care for conditions such as ulcerative colitis, Crohn's disease, diverticulitis, and colorectal carcinoma.
